

Techniques for Solving Competition-Level Software Engineering Problems with Language Models

Assignee Research

June 6, 2026

Abstract

This report synthesises findings from 8 peer-reviewed papers addressing the following research question: What techniques enable language models to solve competition-level software engineering problems v16. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 3.7/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: A Comprehensive Survey of AI-Driven Advancements and Techniques in Automated Program Repair and Code Generation. Research question: What techniques enable language models to solve competition-level software engineering problems v16.

2 Methodology

Systematic literature search across multiple databases yielded 8 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 3.7/10.

3 Results

8 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 3.7/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
