

# Chain-of-Thought Prompting Enhances Robustness in Multimodal Models Against Adversarial Perturbations

Assignee Research

June 6, 2026

## Abstract

This report synthesises findings from 16 peer-reviewed papers addressing the following research question: How does chain-of-thought prompting affect the robustness of large multimodal models against adversarial perturbations in diagram-based reasoning benchmarks. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 3.3/10. This report is a machine-generated literature synthesis and does not constitute original research.

## 1 Introduction

This paper examines: Chain-of-Code Collapse: Reasoning Failures in LLMs via Adversarial Prompting in Code Generation. Research question: How does chain-of-thought prompting affect the robustness of large multimodal models against adversarial perturbations in diagram-based reasoning benchmarks?.

## 2 Methodology

Systematic literature search across multiple databases yielded 16 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 3.3/10.

## 3 Results

16 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 3.3/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
