

Safety Constraint Alignment and Accuracy Trade-offs in Foundation-Sec-8B for GSM8K-V Visual Reasoning

Assignee Research

June 6, 2026

Abstract

This report synthesises findings from 13 peer-reviewed papers addressing the following research question: What is the correlation between safety constraint alignment and accuracy drops in Foundation-Sec-8B when solving multi-step visual reasoning problems in GSM8K-V. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 6.0/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: GSM8K-V: Can Vision Language Models Solve Grade School Math Word Problems in Visual Contexts. Research question: What is the correlation between safety constraint alignment and accuracy drops in Foundation-Sec-8B when solving multi-step visual reasoning problems in GSM8K-V?.

2 Methodology

Systematic literature search across multiple databases yielded 13 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 6.0/10.

3 Results

13 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 6.0/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
