

# XLM-R Zero-Shot Cross-Lingual Transfer Under Adversarial Scaling on XTREME-R Low-Resource Tasks

Assignee Research

July 7, 2026

## Abstract

Pre-trained multilingual language encoders, such as multilingual BERT and XLM-R, show great potential for zero-shot cross-lingual transfer. However, these multilingual encoders do not precisely align words and phrases across languages. Especially, learning alignments in the multilingual embedding space usually requires sentence-level or word-level parallel corpora, which are expensive to be obtained for low-resource languages. An alternative is to make the multilingual encoders more robust; when fine-tuning the encoder using downstream task, we train the encoder to tolerate noise in the context.

## 1 Introduction

This paper examines: Improving Zero-Shot Cross-Lingual Transfer Learning via Robust Training. Research question: How does the scaling of adversarial training (e.g., varying perturbation magnitude) affect the zero-shot cross-lingual transfer performance of XLM-R on XTREME-R, particularly in low-resource language tasks, as measured by per-language accuracy differences?.

## 2 Methodology

Systematic literature search across multiple databases yielded 14 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 7.4/10.

## 3 Results

14 papers retrieved. 11 claims extracted; 9 independently verified. Quality review score: 7.4/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

## 5 Extracted Claims

Claim	Verified	Confidence
The cross-lingual transfer performance improves by 2.1 points on PAWS-X.	✓	0.16
The cross-lingual transfer performance improves by 1.6 points on XNLI.	×	0.13
Robust training remarkably improves generalized cross-lingual transfer.	✓	0.19
