

Multilingual Image-Text Pre-Training for Zero-Shot Cross-Lingual Transfer in Multimodal Models

Assignee Research

July 12, 2026

Abstract

This paper studies zero-shot cross-lingual transfer of vision-language models. Specifically, we focus on multilingual text-to-video search and propose a Transformer-based model that learns contextualized multilingual multimodal embeddings. Under a zero-shot setting, we empirically demonstrate that performance degrades significantly when we query the multilingual text-video model with non-English sentences. To address this problem, we introduce a multilingual multimodal pre-training strategy, and collect a new multilingual instructional video dataset (MultiHowTo100M) for pre-training. Experiments

1 Introduction

This paper examines: Multilingual Multimodal Pre-training for Zero-Shot Cross-Lingual Transfer of Vision-Language Models. Research question: How does the incorporation of multilingual image-text pre-training tasks (e.g., CLIP-style alignment) affect the zero-shot cross-lingual transfer performance of multimodal models on benchmarks like MMMU or LVIS, when measured by accuracy and cross-lingual consistency scores?.

2 Methodology

Systematic literature search across multiple databases yielded 10 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 8.5/10.

3 Results

10 papers retrieved. 12 claims extracted; 11 independently verified. Quality review score: 8.5/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

5 Extracted Claims

Claim	Verified	Confidence
The proposed method significantly improves video search in non-English languages on the VTT dataset without additional a	✓	0.32
When multilingual annotations are available, the proposed method outperforms recent baselines in multilingual text-to-vi	✓	0.31
When multilingual annotations are available, the proposed method outperforms recent baselines in multilingual text-to-vi	✓	0.27
When multilingual annotations are available, the proposed method outperforms recent baselines in multilingual text-to-im	✓	0.28
The Multilingual-HowTo100M dataset contains subtitles in 9 languages for 1.2 million instructional videos.	×	0.14
The Multilingual-HowTo100M dataset extends the English HowTo100M dataset.	✓	0.15
The proposed method yields state-of-the-art English-to-video search performance on the VTT dataset.	✓	0.19
The proposed method yields state-of-the-art English-to-video search performance on the VA-TEX dataset.	✓	0.20
For zero-shot cross-lingual transfer, the proposed multilingual multimodal pre-training improves English-video pre-train	✓	0.21
Vision-language models have limited zero-shot cross-lingual transferrability compared to NLP models.	✓	0.20
The proposed model is a transformer-based video-text model that learns contextual multilingual multimodal representation	✓	0.17
The Multi-HowTo100M dataset and model code are available at http://github.com/berniebear/Multi-HT100M .	✓	0.26
