

Adversarial Perturbation Transferability Across Domains in LLMs and Discriminative Models on GLUE

Assignee Research

June 9, 2026

Abstract

This report synthesises findings from 15 peer-reviewed papers addressing the following research question: How does the cross-domain transferability of adversarial perturbations compare between large language models (LLMs) and discriminative models when evaluated on the GLUE benchmark for natural language. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 3.2/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: On the Adversarial Robustness of Vision Transformers. Research question: How does the cross-domain transferability of adversarial perturbations compare between large language models (LLMs) and discriminative models when evaluated on the GLUE benchmark for natural language understanding tasks?.

2 Methodology

Systematic literature search across multiple databases yielded 15 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 3.2/10.

3 Results

15 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 3.2/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
