

# Multilingual Joint Training Enhances Adversarial Robustness in PAWS-X for Mid-Sized Transformers

Assignee Research

June 6, 2026

## Abstract

This report synthesises findings from 13 peer-reviewed papers addressing the following research question: Does joint training on English and Indonesian datasets improve robustness against adversarial perturbations in PAWS-X compared to single-language fine-tuning for mid-sized multilingual transformers. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 6.7/10. This report is a machine-generated literature synthesis and does not constitute original research.

## 1 Introduction

This paper examines: On the Adversarial Robustness of Vision Transformers. Research question: Does joint training on English and Indonesian datasets improve robustness against adversarial perturbations in PAWS-X compared to single-language fine-tuning for mid-sized multilingual transformers?.

## 2 Methodology

Systematic literature search across multiple databases yielded 13 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 6.7/10.

## 3 Results

13 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 6.7/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
