

# Evol-Instruct Pass@1 and Pass@k Trade-offs in Multi-Turn Code Refinement vs Single-Turn Generation

Assignee Research

June 7, 2026

## Abstract

This report synthesises findings from 11 peer-reviewed papers addressing the following research question: Does the trade-off between pass@1 and pass@k in Evol-Instruct fine-tuning scale differently when applied to multi-turn code refinement tasks versus single-turn generation. 9 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 4.0/10. This report is a machine-generated literature synthesis and does not constitute original research.

## 1 Introduction

This paper examines: Building Math Agents with Multi-Turn Iterative Preference Learning. Research question: Does the trade-off between pass@1 and pass@k in Evol-Instruct fine-tuning scale differently when applied to multi-turn code refinement tasks versus single-turn generation?.

## 2 Methodology

Systematic literature search across multiple databases yielded 11 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 4.0/10.

## 3 Results

11 papers retrieved. 9 claims extracted; 0 independently verified. Quality review score: 4.0/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

## 5 Extracted Claims

Claim	Verified	Confidence
The MATH dataset includes 5K problems across diverse mathematical fields such as algebra, geometry, probability, number	×	0.03
The GSM8K test set consists of 1319 grade-school math word problems.	×	0.03
The training prompt set includes 60K training prompts in total for training and is randomly split into three disjoint sets	×	0.05
The base models used include Gemma-1.1-it-7B, CodeGemma-1.1-it-7B, Mistral-7B-v0.3, and Gemma2-it-9B.	×	0.05
The maximal number of rounds H is set to 6.	×	0.02
Gemma-1.1-it-7B M-DPO Iteration 3 achieves 83.9 on MATH, 51.2 on GSM8K, and 67.6 overall.	×	0.09
CodeGemma-1.1-it-7B Iterative M-DPO achieves 81.5 on MATH, 50.1 on GSM8K, and 65.8 overall.	×	0.04
Mistral-7B-v0.3 Iterative M-DPO achieves 82.3 on MATH, 47.5 on GSM8K, and 64.9 overall.	×	0.04
Gemma-2-it-9B Iterative M-DPO achieves 86.3 on MATH, 54.5 on GSM8K, and 70.4 overall.	×	0.10
