Abstract

This report synthesises findings from 15 peer-reviewed papers addressing the following research question: How does Deepseek R1's vulnerability detection accuracy on Big-Vul correlate with cyclomatic complexity metrics compared to Llama3 and Codestral. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 3.0/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: LLMs in Code Vulnerability Analysis: A Proof of Concept. Research question: How does Deepseek R1's vulnerability detection accuracy on Big-Vul correlate with cyclomatic complexity metrics compared to Llama3 and Codestral?.

2 Methodology

Systematic literature search across multiple databases yielded 15 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 3.0/10.

3 Results

15 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 3.0/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions.
