

Few-Shot Prompting vs. Fine-Tuned Alignment in Cross-Lingual Sentiment Analysis for Indo-Aryan Languages

Assignee Research

June 8, 2026

Abstract

This report synthesises findings from 10 peer-reviewed papers addressing the following research question: How does cross-lingual transfer performance via few-shot prompting differ from fine-tuned alignment methods for sentiment analysis in under-represented Indo-Aryan languages. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 5.8/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: Zero- and Few-Shot Prompting with LLMs: A Comparative Study with Fine-tuned Models for Bangla Sentiment Analysis. Research question: How does cross-lingual transfer performance via few-shot prompting differ from fine-tuned alignment methods for sentiment analysis in under-represented Indo-Aryan languages?.

2 Methodology

Systematic literature search across multiple databases yielded 10 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 5.8/10.

3 Results

10 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 5.8/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
