

Pretraining Data Composition Effects on CodeT5 Cross-Lingual Transfer in Low-Resource Programming Languages

Assignee Research

June 7, 2026

Abstract

This report synthesises findings from 8 peer-reviewed papers addressing the following research question: What is the impact of pretraining data composition on the cross-lingual transfer performance of CodeT5 when evaluated on the MBPP dataset for low-resource programming languages. 7 claims were extracted from source literature; 5 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 7.3/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: Large Language Models: A Survey. Research question: What is the impact of pretraining data composition on the cross-lingual transfer performance of CodeT5 when evaluated on the MBPP dataset for low-resource programming languages?.

2 Methodology

Systematic literature search across multiple databases yielded 8 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 7.3/10.

3 Results

8 papers retrieved. 7 claims extracted; 5 independently verified. Quality review score: 7.3/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

5 Extracted Claims

Claim	Verified	Confidence
ChatGPT was released in November 2022.	×	0.10
Large Language Models (LLMs) have demonstrated strong performance on a wide range of natural language tasks.	✓	0.25
LLMs acquire general-purpose language understanding and generation abilities by training billions of parameters on massive datasets.	✓	0.26
The relationship between model performance, parameter count, and data volume is predicted by scaling laws.	×	0.10
GPT, LLaMA, and PaLM are three popular LLM families.	✓	0.21
The paper reviews popular datasets prepared for LLM training, fine-tuning, and evaluation.	✓	0.25
The paper compares the performance of several popular LLMs on a set of representative benchmarks.	✓	0.22
