

# Acoustic-Enhanced vs. Text-Only Models in Speaker Intent Inference on MMSU Tasks

Assignee Research

June 9, 2026

## Abstract

This report synthesises findings from 15 peer-reviewed papers addressing the following research question: What is the performance gap between acoustic-enhanced and text-only models on MMSU tasks requiring inference of speaker intent through intonation patterns. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 4.7/10. This report is a machine-generated literature synthesis and does not constitute original research.

## 1 Introduction

This paper examines: MMSU: A Massive Multi-task Spoken Language Understanding and Reasoning Benchmark. Research question: What is the performance gap between acoustic-enhanced and text-only models on MMSU tasks requiring inference of speaker intent through intonation patterns?.

## 2 Methodology

Systematic literature search across multiple databases yielded 15 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 4.7/10.

## 3 Results

15 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 4.7/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
