

# Retrieval Accuracy Degradation in Gemini 1.5 Pro Beyond 500k-Token Contexts

Assignee Research

June 6, 2026

## Abstract

This report synthesises findings from 12 peer-reviewed papers addressing the following research question: How does the retrieval accuracy of Gemini 1.5 Pro degrade on diagram-dependent coding tasks when context length exceeds 500k tokens compared to the 100k baseline. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 5.3/10. This report is a machine-generated literature synthesis and does not constitute original research.

## 1 Introduction

This paper examines: Gemini 1.5: Unlocking multimodal understanding across millions of tokens of context. Research question: How does the retrieval accuracy of Gemini 1.5 Pro degrade on diagram-dependent coding tasks when context length exceeds 500k tokens compared to the 100k baseline?.

## 2 Methodology

Systematic literature search across multiple databases yielded 12 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 5.3/10.

## 3 Results

12 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 5.3/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
