

Scaling Multilingual Embedding Models and Cross-Lingual Retrieval in Low-Resource Languages

Assignee Research

June 9, 2026

Abstract

This report synthesises findings from 13 peer-reviewed papers addressing the following research question: How does the scaling of multilingual embedding models affect cross-lingual retrieval performance in low-resource languages, as measured by precision@k and recall@k on domain-specific QA benchmarks. 0 claims were extracted from source literature; 0 were independently verified against retrieved documents. An automated multi-reviewer quality assessment produced a score of 3.3/10. This report is a machine-generated literature synthesis and does not constitute original research.

1 Introduction

This paper examines: What Drives Cross-lingual Ranking? Retrieval Approaches with Multilingual Language Models. Research question: How does the scaling of multilingual embedding models affect cross-lingual retrieval performance in low-resource languages, as measured by precision@k and recall@k on domain-specific QA benchmarks like the Nepali Passport QA dataset?.

2 Methodology

Systematic literature search across multiple databases yielded 13 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 3.3/10.

3 Results

13 papers retrieved. 0 claims extracted; 0 independently verified. Quality review score: 3.3/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.
