

Multilingual Multimodal Pre-Training and Zero-Shot Text-Video Retrieval Performance Gaps

Assignee Research

June 24, 2026

Abstract

This paper studies zero-shot cross-lingual transfer of vision-language models. Specifically, we focus on multilingual text-to-video search and propose a Transformer-based model that learns contextualized multilingual multimodal embeddings. Under a zero-shot setting, we empirically demonstrate that performance degrades significantly when we query the multilingual text-video model with non-English sentences. To address this problem, we introduce a multilingual multimodal pre-training strategy, and collect a new multilingual instructional video dataset (MultiHowTo100M) for pre-training. Experiments

1 Introduction

This paper examines: Multilingual Multimodal Pre-training for Zero-Shot Cross-Lingual Transfer of Vision-Language Models. Research question: To what extent does multilingual multimodal pre-training reduce the performance gap between English and non-English queries in zero-shot text-video retrieval?.

2 Methodology

Systematic literature search across multiple databases yielded 8 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 7.7/10.

3 Results

8 papers retrieved. 12 claims extracted; 10 independently verified. Quality review score: 7.7/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

5 Extracted Claims

Claim	Verified	Confidence
The proposed method significantly improves video search in non-English languages without additional annotations.	✓	0.35
The proposed method outperforms recent baselines by a large margin in multilingual text-to-video search on VTT and VATEX	✓	0.38
The proposed method outperforms recent baselines by a large margin in multilingual text-to-image search on Multi30K when	✓	0.31
The Multilingual-HowTo100M dataset extends the English HowTo100M dataset to contain subtitles in 9 languages for 1.2 mil	✓	0.23
Pre-training on multilingual text-video data enhances search by exploiting the visual data as an implicit 'pivot' at sca	✓	0.29
The proposed multilingual multimodal pre-training improves English-video pre-training by 2 \sim 2.5 in average R@1 across 9	✓	0.20
The proposed method achieves state-of-the-art English \rightarrow video search performance on VTT and VATEX.	✓	0.16
The proposed method outperforms other baselines by a large margin in multilingual text \rightarrow video search on VATEX and text \rightarrow sim	✓	0.25
The proposed method achieves state-of-the-art multilingual text \rightarrow video search performance in a supervised setup.	×	0.15
Vision-language models have limited zero-shot cross-lingual transferrability compared to NLP models.	✓	0.20
The Multilingual-HowTo100M dataset is constructed to improve the zero-shot cross-lingual capability of vision-language m	×	0.14
The proposed method utilizes a transformer-based video-text model that learns contextual multilingual multimodal repre	✓	0.16
