

Overlap Ratio Variations in Synthetic Tabular Pretraining and OOD Calibration Errors on Imbalanced Benchmarks

Assignee Research

June 12, 2026

Abstract

Abstract The rapid evolution of large language models (LLMs) has driven a transformative shift in artificial intelligence (AI), reshaping both research paradigms and practical applications. Distinguished from their predecessors by unprecedented scale and advanced capabilities, LLMs necessitate new frameworks for understanding their development, behavior, and societal impact. This survey systematically reviews recent advancements in LLM techniques across four key dimensions: (1) pre-training methodologies, which establish core model capabilities through large-scale self-supervised training, arc

1 Introduction

This paper examines: A Survey of Large Language Models. Research question: How does varying the overlap ratio in synthetic tabular pretraining data impact the out-of-distribution calibration error of foundation models on imbalanced benchmarks?.

2 Methodology

Systematic literature search across multiple databases yielded 16 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 8.5/10.

3 Results

16 papers retrieved. 10 claims extracted; 10 independently verified. Quality review score: 8.5/10.

4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

5 Extracted Claims

Claim	Verified	Confidence
The rapid evolution of large language models (LLMs) has driven a transformative shift in artificial intelligence (AI).	✓	0.32
LLMs are distinguished from their predecessors by unprecedented scale and advanced capabilities.	✓	0.22
The survey reviews advancements in LLM techniques across four key dimensions: pre-training methodologies, post-training	✓	0.27
Pre-training methodologies establish core model capabilities through large-scale self-supervised training, architectural	✓	0.36
Post-training techniques include supervised fine-tuning and reinforcement learning.	✓	0.19
Post-training techniques adapt foundational models to downstream tasks and enhance their alignment and safety.	✓	0.26
Utilization strategies include in-context learning, prompt engineering, and agentic reasoning.	✓	0.21
Utilization strategies optimize real-world deployment and enable effective interaction with external environments.	✓	0.25
Evaluation methods encompass benchmarks for key ability dimensions such as core language capabilities, reasoning, and sa	✓	0.28
The survey identifies critical research issues concerning theoretical foundations, efficient scaling, alignment, and age	✓	0.26
