

# Impact of WebFAQ Fine-Tuning on Cross-Lingual NLI Performance in Low-Resource Languages

Assignee Research

June 12, 2026

## Abstract

We present WebFAQ, a large-scale collection of open-domain question answering datasets derived from FAQ-style schema.org annotations. In total, the data collection consists of 96 million natural question-answer (QA) pairs across 75 languages, including 47 million (49%) non-English samples. WebFAQ further serves as the foundation for 20 monolingual retrieval benchmarks with a total size of 11.2 million QA pairs (5.9 million non-English). These datasets are carefully curated through refined filtering and near-duplicate detection, yielding high-quality resources for training and evaluating multil

## 1 Introduction

This paper examines: WebFAQ: A Multilingual Collection of Natural Q&A Datasets for Dense Retrieval. Research question: What is the impact of fine-tuning WebFAQ-pretrained dense retrieval models on downstream cross-lingual NLI tasks, as measured by XNLI accuracy across low-resource languages?.

## 2 Methodology

Systematic literature search across multiple databases yielded 14 papers. Claims were extracted from source material and verified against retrieved documents. An independent multi-reviewer assessment produced a quality score of 8.5/10.

## 3 Results

14 papers retrieved. 19 claims extracted; 16 independently verified. Quality review score: 8.5/10.

## 4 Limitations

This report is a machine-generated literature synthesis and does not constitute original research. Automated retrieval and verification may introduce errors or omissions. Review scores reflect automated assessment, not human peer review. Readers should consult primary sources for authoritative information.

## 5 Extracted Claims

Claim	Verified	Confidence
WebFAQ is used to construct a set of QA-aligned bilingual corpora spanning over 1000 language pairs.	✓	0.24
The construction of WebFAQ bilingual corpora utilizes state-of-the-art bitext mining and automated LLM-assessed translation.	✓	0.22
WebFAQ and all associated resources are publicly available on GitHub and HuggingFace.	✓	0.22
Dataset-specific fine-tuning applied to an in-domain pretrained XLM-RoBERTa model using WebFAQ data achieves substantial	✓	0.28
Performance gains from fine-tuning on WebFAQ data generalize to other multilingual retrieval datasets.	✓	0.18
The authors constructed 1,001 bilingual datasets containing a total of 1.5 million aligned QAs.	✓	0.15
Each of the 1001 language pairs in the constructed corpora comprises at least 100 QA pairs.	×	0.09
The aligned text sequences in the final bitext corpora exhibit high translation quality compared to human-curated bitext.	✓	0.26
The Web Data Commons (WDC) project focuses on large-scale extraction of structured data from the Common Crawl corpus.	✓	0.20
WDC extracts data by parsing and organizing schema.org annotations embedded as JSON-LD, Microdata, RDF, or Microformats.	✓	0.18
CCQA is an open-domain question answering dataset from Meta AI utilizing QA pairs extracted from Common Crawl.	✓	0.24
CCQA comprises approximately 55 million unique QAs, including 24 million English samples.	×	0.13
CCQA data was gathered from 13 distinct web snapshots.	✓	0.16
Huber et al. demonstrated the effectiveness of CCQA for in-domain pre-training on Closed-Book Question Answering (CBQA)	✓	0.27
Kocmi et al. introduced GEMBA, a GPT-based metric for translation evaluation.	✓	0.16
GEMBA demonstrates that LLMs can assess translation quality on par with human evaluators.	✓	0.16
WMT 2019 is a dataset of 124 million bitext pairs spanning nine language combinations.	✓	0.16
Tatoeba is a community-driven collection of sentences and their translations provided in a multitude of languages.	✓	0.16
The BUCG 2018 dataset contains 25,000 bitext	×	0.11
