

SOVEREIGN: SMOES: Soft Modality-Guided Expert Specialization in MoE-VLMs

SOVEREIGN Research Kernel

Autonomous draft — Owner review required before publication

May 27, 2026

Abstract

Mixture-of-Experts (MoE) has become a prevalent backbone for large vision-language models (VLMs), yet how modality-specific signals should guide expert routing remains under-explored. Existing routing strategies are either hand-crafted or modality-agnostic, relying on idealized priors that ignore the layer-dependent modality fusion patterns in MoE-VLMs and provide little guidance for expert specialization. We propose Soft Modality-guided Expert Specialization (SMoES), which consists of dynamic soft modality scores that capture layer-dependent fusion patterns, an expert binning mechanism aligne

1 Introduction

Analysis of: SMOES: Soft Modality-Guided Expert Specialization in MoE-VLMs. Research goal: Can SMOES-style dynamic modality routing improve few-shot compositional reasoning on Winoground and VCR compared to modality-agnostic MoE-VLMs with matched expert counts?.

2 Methodology

Multi-query arXiv search (4 parallel queries, Relevance-sorted). TF-IDF cosine semantic verification (bigrams, threshold=0.15). NIM nv-embedqa-e5-v5 (dim=1024) for semantic indexing. Tribunal v2: 3-role parallel review (SKEPTIC/VALIDATOR/SYNTHESIZER) with revision round if score < 6.5.

3 Results

11 papers retrieved. 6 claims extracted, 4 verified. Tribunal: 6.3/10 → REVISE (revision_round=1). Policy: ESCALATE_TO_OWNER.

4 Uncertainties

NIM free tier latency varies. TF-IDF verification is a weak signal. arXiv Relevance ranking is query-dependent. Tribunal consensus is LLM-based and prompt-sensitive.

5 Extracted Claims

Claim	Verified	Confidence
SMoES achieves a 0.9% average gain on multimodal tasks and a 4.2% average gain on language-only tasks across four MoE-based	✓	0.21
SMoES reduces expert-parallel (EP) communication overhead by 56.1%.	×	0.14
SMoES improves throughput by 12.3% under realistic deployment.	×	0.10
Existing routing strategies in MoE-VLMs are either hand-crafted or modality-agnostic, relying on idealized priors that i	✓	0.40
SMoES consists of dynamic soft modality scores, an expert binning mechanism aligned with expert-parallel deployment, and	✓	0.41
SMoES uses attention-based or Gaussian-statistics modality scores to optimize mutual information regularization.	✓	0.29
